            Primer A: No sequence submitted
            Primer B: No sequence submitted
            STS size: 621
            Protocol:
            WGS-discovery (WGS):
            Paired-end low-coverage whole genome shotgun reads were generated
```

```
            from 9 breeds
            (German Shepherd, Rottweiler, Bedlington Terrier, Beagle, Labrador
            Retriever, English
            Shepherd, Italian Greyhound, Alaskan Malamute and the Portuguese
            Water Dog -100,000 each)
            and five other canids (Chinese, Alaskan, Indian and Spanish Gray
            Wolf as well as the
            Californian Coyote).
            The WGS reads were placed uniquely on the CanFam1.0 boxer assembly
            and SNP detection was
            carried out by SSAHA-SNP. 863872 reads were annotated as STSs and
            485941 SNPs were
            annotated with alleles from the boxer and the breed or canid from
            which the particular
            read came. The validation rate for these SNPs was estimated at
            approximately 98%.
            WGA-discovery (WGA) of Boxer/Poodle SNPs:
            A second set of SNPs was generated using a similar methodology
            except that the contigs
            from the 1.5x poodle assembly (Kirkness 2003) were used instead of
            WGS reads. Since this
            sequence lacked base quality scores, arbitrary quality scores of
            phred 40 were assigned
            before the poddle seqeunce was placed uniquely on the CanFam1.0
            boxer assembly and SNP
            detection was carried out by SSAHA-SNP. 1637780 SNPs were annotated
            with alleles from the
            boxer and the poodle. The validation rate for these SNPs was
            estimated at approximately TBD%.
            Internal-WGA-discovery (I-WGA):
            A third set of SNPs were discovered by comparing reads in the WGA
            assembly. SNPs were
            defined as mismatch positions that had a base quality of >= 30 on
            both reads in a region
            that aligned without gaps, and with at most one additional mismatch
            in the ten flanking
            bases. For each allele, at least one additional read had to confirm
            it. 731476 SNPs were
            annotated with alleles between the two boxer alleles. The
            validation rate for these SNPs
            was estimated at approximately TBD%.

PS   Claim 1; Page 51-53; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 29; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p40 subunit protein
CC   encoding full-length cDNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and
PT preventing autoimmune diseases, inflammatory diseases and/or graft
PT rejection in animals.
XX
PS Example 3; Page 73-74; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 55; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p40 protein
CC   encoding cDNA.

XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 24; SEQ ID NO 38; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12 protein encoding cDNA.

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Claim 14; Page 36; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

PT   Recombinant feline interleukin-12, useful as immunostimulant and for
PT   treating e.g. viral infections in cats, and related nucleic acid
PT   constructs.
XX
PS   Claim 3; Page 30; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC   of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC   is useful for carnivores, and particularly domestic cats in the
CC   following: (i) as immunostimulant, for preventative or therapeutic use;
CC   and (ii) treating tumors and autoimmune diseases, or diseases associated
CC   with a Th1 defect, especially pre-existing infections by feline immune
CC   deficiency virus (FIV), feline leukemia virus and corona virus

PT   Vaccine for treating or preventing lentivirus infection in cats, contains
PT   nucleic acid sequence encoding viral protein under control of eukaryotic
PT   promoter.
XX
PS   Disclosure; Page 29-31; 37pp; German.
XX
CC   This invention describes a novel vaccine (A) for prevention or treatment
CC   of lentivirus infection in felines which comprises an immunizing nucleic
CC   acid sequence (I) that contains, or comprises, at least part of a gene
CC   encoding a protein (II) of the virus, under control of a eukaryotic
CC   promoter functional in the relevant animal. (II) is especially the
CC   envelope (env) protein. The invention also describes (1) vaccine (A)
CC   containing an immunizing protein, or fragment, from a lentivirus plus at
CC   least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC   lentivirus protein, or fragment, especially derived from feline immune
CC   deficiency virus (FIV), by expressing the corresponding nucleic acid
CC   sequence in a host cell. The products of the invention have antiviral
CC   activity. The vaccine (A) and related protein-based vaccines, are
CC   particularly used to treat or prevent lentivirus infections in domestic
CC   cats, especially feline immune deficiency virus (FIV). Vaccination with
CC   (A) allows differentiation between vaccinated and infected animals, from
CC   the antibody status. The vaccines may be formulated with an adjuvant
CC   (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC   immune response, particularly a Th1 response

XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT Novel feline cytokine protein - useful for treating feline auto:immune
PT diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS Claim 21; Page 56-57; 94pp; Japanese.
XX
CC This sequence encodes a novel feline cytokine mature protein, FLAFp40.
CC This protein can be used in the production of a FLAFp35/FLAFp40
CC heterodimer which can potentiate the cytotoxic activity of feline
CC cytotoxic T lymphocyte cells. Such proteins are used for treatment of
CC feline autoimmune diseases e.g. as caused by feline herpes virus or
CC feline calcivirus

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 28; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain mature IL-12p40 subunit
CC   complementary DNA.

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

```
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 32; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

PT Large scale production of interleukin-12 for pharmaceutical applications,
PT comprises infecting an insect cell with a recombinant virus containing
PT gene encoding IL-12, and producing IL-12 by carrying out spinner culture
PT of insect cell.
XX
PS Example; SEQ ID NO 3; 8pp; Japanese.
XX
CC The invention related to the large scale production of interleukin-12 (IL
CC -12), which involves infecting an insect cell with a recombinant virus
CC containing a gene encoding IL-12, and producing IL-12 by carrying out
CC spinner culture of insect cell. The method is useful for producing IL-12,
CC preferably canine IL-12. IL-12 has pharmaceutical applications. The
CC present sequence encodes canine IL-12 P40, which is used in the
CC exemplification of the present invention.

PT Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS Claim 8; Page 30-31; 51pp; Japanese.
XX
CC This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC recognising it may be used in the treatment of viral diseases in dogs
CC (such as canine distemper, canine parvovirus and canine infectious
CC hepatitis). The antibodies may also be used in isolation of CLAF from
CC culture of the transformant host cells by affinity chromatography. The
CC p40 homodimer can be used for the treatment of autoimmune diseases in
CC dogs

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 4; SEQ ID NO 109; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the canine single chain IL-12p40 subunit
CC   complementary DNA.

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 137; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

PT   Novel gene vector for expression in insect useful for expression of
PT   foreign gene such as dog interleukin 12 gene, comprises two promoters.
XX
PS   Claim 4; SEQ ID NO 5; 13pp; Japanese.
XX
CC   The invention relates to a novel gene vector for expression in an insect
CC   comprising at least two promoters, particularly the polyhedrin promoter
CC   and p10 promoter. The vector contains at least two types of foreign
CC   protein expression gene and the gene product of the vector is produced
CC   using a gene recombinant baculovirus, particularly a recombinant silkworm
CC   nuclear polyhedrosis virus. The baculovirus is proliferated in a
CC   silkworm. The vector of the invention may be useful for expression of a
CC   foreign gene, such as canine interleukin 12. Within the vector, two types
CC   of foreign protein expression genes are integrated simultaneously for
CC   their simultaneous expression. The current sequence is that of the canine
CC   interleukin-12 (IL-12) p40 DNA of the invention.

PT   Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
PT   and p35 polypeptides), useful for treating various diseases e.g. diabetic
PT   retinopathy and cancer.
XX
PS   Claim 1; Page 137; 223pp; English.
XX
CC   The invention relates to nucleic acids encoding modified cytokine
CC   polypeptides (i.e. modified p40 and p35 polypeptides). The modified
CC   cytokine polypeptides have T-cell proliferative and interferon (IFN)-
CC   gamma induction activities. The polypeptides and polynucleotides of the
CC   invention are useful for treating various diseases e.g. bacterial
CC   infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
CC   polynucleotide may also be useful as a vaccine adjuvant, to enhance a
CC   vaccinated host's cell-mediated immunity for protective response to a
CC   pathogen. The present sequence is a modified human p40 protein encoding
CC   DNA

PT   Nucleic acid encoding ovine interleukin-5 or -12 - used as vaccine
PT   adjuvants and to treat or prevent microbial infections in livestock.
XX
PS   Claim 10; Page 49-51; 78pp; English.
XX
CC   The sequences given in AAT50757-59 encode ovine interleukin-12 (IL-12) 35
CC   kD subunit (partial and full length sequence) and the 40 kD subunit.
CC   Ovine IL-5 or IL-12 are used to treat and/or prevent infections in
CC   livestock (esp. cows and sheep), particularly where the animals are
CC   stressed, e.g. during transport. IL-5 and IL-12 can also be used as
CC   adjuvants in vaccines for veterinary use (partic. weakly immunogenic
CC   subunit or synthetic peptide vaccines). They may also be used to treat
CC   cancer, immunosuppression and allergy, to enhance/suppress the
CC   reproductive system and to promote growth or early maturity. Optionally
CC   interleukin can be delivered from constructs or delivery cells and
CC   antibodies are useful in enzyme immunoassays for rapid diagnosis of
CC   infection. The interleukins are immunopotentiators, especially IL-5
CC   promotes growth of early haematopoietic progenitor cells and generation
CC   of cytotoxic cells from thymocytes, also it stimulates production and
CC   secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12
CC   induces production of gamma-interferon by, and proliferation of, T and NK
CC   cells and increases the (non-)specific cytolytic lymphocyte response. The
CC   genetic constructs can also be used for in vitro production of IL-5 or -
CC   12. (Updated on 17-OCT-2003 to standardise OS field)

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Claim 17; Page 28-29; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

PT   Method for efficiently expressing recombinant human interleukin 12 in
PT   eukaryotic cell.
XX
PS   Example 2; SEQ ID NO 2; 14pp; Chinese.
XX
```

```
CC   The invention describes the process of producing human recombinant
CC   interleukin-12 (IL-12) includes: providing a nucleotide sequence
CC   corresponding to the P35 subunit with the first signal peptide and a
CC   nucleotide sequence corresponding to the P40 subunit; inserting the
CC   nucleotide sequences into an expression vector; converting the eukaryotic
CC   cell with the expression vector; and culturing the transfected eukaryotic
CC   cell in condition suitable for recombinant human IL-12 expression. The
CC   process balances the expression amount of both P35 and P40 subunits and
CC   thus raises the expression amount of IL-12 with bioactivity via raising
CC   the expression strength of P35 subunit. This sequence represents the
CC   human interleukin-12 (IL-12) P40 subunit polynucleotide.

XX
CC   AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC   12 is a heterodimeric cytokine which was originally identified as a
CC   factor which induces gamma-interferon from T cells and natural killer
CC   cells as set forth in PCT/US91/06332, published April 2 1992, and
CC   incorporated by reference. EP 433827, published June 26 1991, disclosed
CC   IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC   is defined as a heterodimeric glycoprotein comprised of two covalently
CC   linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC   subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC   ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC   for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC   used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC   correct PN field.)

PT   Therapy of graft-versus-host disease - by administration of interleukin-
PT   12 to maintain and/or promote graft-versus-leukaemia effects.
XX
PS   Disclosure; Col 17-20; 20pp; English.
XX
CC   The invention relates to a method for the treatment or prevention of
CC   graft-versus-host disease (GVHD) which comprises the administration of
CC   interleukin-12 (IL-12) at the time of bone-marrow transplantation to
CC   maintain or promote graft-versus-leukaemia effects. Preferably, dosage is
CC   0.001-100 (preferably 1-100) mu g/kg for 3 days starting on the day of
CC   the bone marrow transplant. IL-12 is administered daily until there is an
CC   improvement in the condition. Administration is oral, cutaneous,
CC   subcutaneous, intravenous or by inhalation preferably subcutaneous, or
CC   intravenous. The present sequence encodes the human interleukin-12 40kDa
CC   subunit

PT   New plasmids containing an interferon-alpha coding sequence, used for the
PT   treatment of a mammalian condition or disease, particularly cancer.
XX
PS   Claim 11; Page 43-45; 137pp; English.
XX
CC   This sequence represents the wild type coding region for the human
CC   interleukin 12 p40 subunit. The invention relates to a novel plasmid
CC   comprising a cytomegalovirus (CMV) promoter transcriptionally linked with
CC   an interferon alpha (IFN-alpha) coding sequence, and a growth hormone 3'-
CC   untranslated region (UTR). The plasmids can be used for treating a
CC   mammalian condition or disease, particularly cancer

PT   Use of immunodeficient mice comprising human cells - particularly
PT   SCTD/beige mice comprising human immune cells for evaluating vaccines
PT   against cancers or human pathogens, e.g. HIV.
XX
PS   Example 10(c)(i); Page 110; 154pp; English.
XX
CC   Immunodeficient mice comprising human cells can be used for exposure to
CC   human pathogens and/or their components or human tumour cells and human
CC   peripheral blood lymphocytes. Also claimed is a vaccine comprising a cell
CC   modified to express an antigen and an immune-modulating protein, this is
CC   preferably an expression vector comprising a polynucleotide sequence that
CC   encodes the antigen and immune-modulating protein. Such vectors can be
CC   used to treat a subject having a tumour by transferring the expression
CC   vector into the tumour so that the antigen and the immune-modulator are
CC   expressed by at least the tumour. The methods can be used for producing
CC   and evaluating vaccines including cancer vaccines and vaccines directed
CC   against human pathogens, e.g. HIV, Leishmania, Mycobacterium, Listeria or
CC   Plasmodium. Two primers (AAV83197, AAV83198) were used to amplify the IL-
CC   12B for insertion into expression vectors of the invention

PT   Human interleukin-12 recombinant insect virus strain and its preparation.
XX
PS   Claim 5; Fig 7; 17pp; Chinese.
XX
CC   The invention relates to a recombinant baculovirus comprising DNA
CC   encoding human interleukin 12 (hIL-12) and methods for its preparation.
CC   The recombinant baculovirus strain is designated Autographa california
CC   nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
CC   contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
CC   (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
```

```
CC   respectively under the control of the viral polyhedrin and P10 promoters.
CC   The baculovirus can be used in the recombinant production of human IL-12
CC   which is suitable for treating tumours and bacterial, viral and other
CC   infections. The present sequence represents the human IL-12 P40 subunit
CC   gene used in construction of the baculovirus vector of the invention

PT   Novel anti-tumor agent comprising interleukin-23 gene, or cell transduced
PT   with interleukin-23 gene, as active ingredient, useful for activating
PT   anti-tumor immune response and treating tumor.
XX
PS   Disclosure; SEQ ID NO 2; 23pp; Japanese.
XX
CC   The invention relates to a novel anti-tumour agent comprising an
CC   interleukin-23 (IL-23) gene, or a cell transduced with an IL-23 gene, as
CC   an active ingredient. The molecules of the invention demonstrate
CC   cytostatic and immunostimulant activities and may be useful within an
CC   anti-tumour agent which activates an anti-tumour immune response. The
CC   agent is safe when used in cancer treatment, may be combined with other
CC   treatments and induces tumour-specific acquired immunity. The current
CC   sequence is that of the human interleukin-23 (IL-23) p40 subunit DNA of
CC   the invention.

PT   Pharmaceutical formulation for inhibiting immune response generated by
PT   interleukin-23 (IL-23) and treating e.g. autoimmune diseases, comprises
PT   p40 molecules or gene encoding p40 molecules.
XX
PS   Claim 3; SEQ ID NO 1; 12pp; Japanese.
XX
CC   This invention relates to a novel pharmaceutical formulation used for
CC   inhibiting the immune response generated by interleukin-23 (IL-23).
CC   Specifically, it refers to a formulation comprising the p40 protein or
CC   the gene encoding this protein thereof. The present invention describes
CC   the p40 gene contained in the form of a viral or non-viral vector that is
CC   capable of expressing and secreting the p40 protein. This vector can be
CC   introduced into a cell such that it can in turn inhibit the immune
CC   response generated by the production of IL-23. Accordingly, this method
```

```
CC   is useful for suppressing organ transplant rejection or treating
CC   immunological disorders associated with abnormal immune response with
CC   regard to IL-23. Furthermore, it can be used to treat autoimmune diseases
CC   and allergy. As such, compositions exhibit immunosuppressive and
CC   antiallergic activities. This polynucleotide sequence is the human p40
CC   gene of the invention.

PT   Novel compound comprising target specific portion having monoclonal
PT   antibody having specificity for oncofetal fibronectin and effector
PT   portion having interleukin-12, useful for treating cancer e.g.
PT   glioblastoma.
XX
PS   Claim 36; SEQ ID NO 10; 83pp; English.
XX
CC   The invention provides a compound comprising a target specific portion
CC   and an effector portion, in which the target specific portion comprises
CC   or consists of a monoclonal antibody having specificity for oncofetal
CC   fibronectin, or its fragment or variant which retains the antigen binding
CC   specificity of the parent monoclonal antibody, and the effector portion
CC   comprises or consists of interleukin-12, or its functional fragment or
CC   variant. The monoclonal antibody binds to a region of oncofetal
CC   fibronectin other than the extra-domain B region. Preferably, the
CC   compound comprises a target specific portion that is capable of binding
CC   to an amino acid sequence present in fibronectin expressed in both fetal
CC   and normal adult tissue, especially the repeat 7 domain of fibronectin,
CC   and is preferably specific for human oncofetal fibronectin. The
CC   monoclonal antibody is preferably a BC1 antibody. The invention also
CC   provides nucleic acids encoding the compounds of the invention and
CC   methods of their use in the production of these compounds, as well as
CC   methods of using the compounds in medicine, especially for the treatment
CC   of cancer in a patient, where the patient is a mammal, preferably a
CC   human, and the patient has a solid tumor. The cancer is a glioblastoma
CC   (claimed) or ovarian, gastric, colorectal or pancreatic cancer. The
CC   present sequence is the coding sequence of the p40 domain of human
CC   interleukin-12. In a claimed compound, the effector portion consists of a
CC   single chain interleukin-12 comprising or consisting of an interleukin-12
CC   p40 domain conjugated to the interleukin-12 and p35 domain AEB48815 via a
CC   disulfide bond. A further claimed compound comprises the p40 sequence
CC   linked by disulfide bond to a fusion protein AEB48818 comprising the BC1
CC   heavy chain fused to human interleukin-12 p35.

PT   Novel human or mouse interleukin (IL)-12p40 subunit mutant genes, that
PT   inhibit secretion of IL-12p40, but normally secrete IL-12p70, useful as
PT   adjuvant for DNA vaccination and gene therapy to AIDS, cancer, malaria.
XX
PS   Claim 1; Page 89-90; 103pp; English.
```

```
XX
CC   The invention relates to mutant interleukin (IL)-12p40 subunit genes
CC   which produces highly active human or mouse IL-12p40 sequence. IL-12p40
CC   DNA is useful for DNA immunisation or gene therapy for treating diseases
CC   such as cancer, AIDS, hepatitis C, hepatitis B or influenza, malaria or
CC   tuberculosis, as an therapeutic or prophylactic adjuvant. IL-12p40 DNA
CC   induces immune response by increasing the hydrolysis activity of
CC   cytotoxic T lymphocytes when IL-12p40 subunit gene is injected with the
CC   DNA vaccine, or increasing secretion of interferon (IFN)-gamma from T
CC   helper cells or CD8+ T cells when IL-12p40 subunit gene is injected with
CC   DNA vaccine. IL-12p40 DNA is useful in gene therapy and as a DNA vaccine.
CC   The present sequence is a DNA encoding human Interleukin (IL)-12p40
CC   subunit protein

PT   Attenuated recombinant virus used for cancer therapy - comprises DNA
PT   encoding cytokine and/or tumour associated antigen.
XX
PS   Example 27; Fig 33; 232pp; English.
XX
CC   The sequences given in AAQ67879-80 are expression cassettes which contain
CC   the p40 and p35 subunits of human interleukin-12 (IL-12) under the
CC   control of the entomopox virus (EPV) promoter and the vaccinia E3L
CC   promoter, respectively. These sequences were used in the construction of
CC   an ALVAC-based recombinant virus containing the genes for the two
CC   subunits of human IL-12. The p40 subunit was amplified using primers
CC   JP202 and JP189 and placed under the control of the entomopox virus (EPV)
CC   42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified
CC   using primers JP186 and JP201 and placed under the control of the
CC   vaccinia E3L promoter using primers JP218 and JP220. The expression
CC   cassette was isolated and ligated with pBSSK+ generating plasmid
CC   PBSHIL12p35II. The p35 and p40 expression cassettes were excised and
CC   assembled in pBSSK+ to give PBSHIL12 in which the two expression
CC   cassettes are orientated head-to-head relative to each other. The
CC   combination casette containing the poxvirus promoted genes for both IL-12
CC   subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector
CC   plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid
CC   and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which
CC   contains both the human IL-12 genes in the C6 locus. The resulting virus
CC   may be used in a composition for inducing an antigenic or immunological
CC   response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003
CC   to correct PN field.)

PT   Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT   determinants useful in immunotherapy to immunize against cancers and
PT   other diseases such as influenza, Newcastle Disease and rabies.
XX
PS   Example 27; Fig 33; 163pp; English.
XX
CC   The present invention describes a recombinant poxvirus (I), comprising
CC   exogenous DNA encoding an antigenic determinant of a pathogen which is
CC   then expressed in vivo in infected host cells after administration to a
CC   patient and therefore induces an immunological response. (I) may be used
CC   to vaccinate patients against a wide range of diseases and disorders
CC   depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC   used to vaccinate against diseases such as rabies, influenza and
CC   Newcastle Disease. It is particularly useful for immunising against
CC   cancers. The poxvirus (I) also provides a means of manipulating
CC   lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC   modalities for cancer. (I) also have enhanced safety compared to
CC   unattenuated viruses (attenuation reduces the virulence of the viruses)
CC   and known recombinant poxvirus vaccines. This increased level of safety
CC   reduces the possibility of a 'runaway' infection in the host and reduces
CC   the chance of transmission from vaccinated to unvaccinated individuals
CC   and contamination of the environment. The present sequence represents a
CC   EPV 42 kDa/human IL-12 P40 expression cassette used in the
CC   exemplification of the present invention

PT   New recombinant poxvirus which is an attenuated avipox Virus that
PT   expresses an exogenous DNA encoding carcinoembryonic antigen and an
PT   exogenous DNA encoding B7 protein, useful for cancer therapy.
XX
PS   Example 27; SEQ ID NO 194; 181pp; English.
XX
CC   The invention describes a recombinant poxvirus containing exogenous DNA
CC   in a nonessential region of the poxvirus, where the poxvirus is an
CC   attenuated avipox Virus that expresses an exogenous DNA encoding
CC   carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also
CC   described are: a composition comprising a poxvirus above in admixture
CC   with a carrier; and expressing carcinoembryonic antigen and B7 protein in
CC   vivo comprising administering to a mammal the composition above.
CC   Disclosed are: making recombinant poxvirus defined above; recombinant
CC   poxvirus vaccine having an increased level of safety compared to known
CC   recombinant poxvirus vaccines; and a modified vector for expressing a
CC   gene product in a host. The recombinant poxvirus is useful for providing
CC   a recombinant poxvirus vaccine having an increased level of safety
CC   compared to known recombinant poxvirus vaccines. The recombinant poxvirus
CC   is useful for cancer therapy. This sequence represents a human IL-12
CC   expression cassette used in the creation of NYVAC rescue virus and
CC   canarypox virus vector ALVAC comprising the human IL-12 gene.

PT Preparation of bovine interleukin 12 comprising using a vector containing
PT the gene encoding it, useful for the prevention and treatment of chronic
PT and opportunistic infections.
XX
PS Example 1; Page 8-9; 11pp; Japanese.
XX
CC The invention relates to a method for the preparation of bovine
CC interleukin 12 (BoIL12). BoIL12 consists of a heterodimer of p35 and p40
CC subunits. BoIL12 is produced by introducing into a host cell, recombinant
CC vectors containing genes encoding the p35 and p40 subunits. This sequence
CC represents the coding region for the bovine IL12 p40 subunit. Interleukin
CC 12 is used for the prevention and treatment of chronic infections and
CC opportunistic infections

PT New expression vector comprising DNA encoding a subunit of a dimeric form
PT of interleukin under transcriptional control of an ecdysone-inducible
PT promoter, useful in preparing a composition for treating e.g.,
PT inflammatory disease.
XX
PS Disclosure; Page 86-87; 87pp; English.
XX
CC The present invention relates to an expression vector comprising DNA
CC encoding a subunit of a dimeric form of interleukin under transcriptional
CC control of an ecdysone-inducible promoter. The expression vector is
CC useful in preparing a composition for treating a disease having a
CC pathogenesis which includes endogenous production of cytokine IL-12, IL-
CC 23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-
CC induced inflammation, epithelial airway inflammation such as asthma,
CC allergic disease, or autoimmune disease such as multiple sclerosis or
CC inflammatory bowel disease. The present sequence is the coding sequence
CC of the human interleukin-12 beta chain used in the exemplification of the
CC invention.

PT   Antibodies to cytotoxic lymphocyte maturation factor protein - useful as
PT   affinity ligands, assay reagents and medicaments.
XX
PS   Disclosure; Fig 25; 80pp; English.
XX
CC   The present DNA sequence encodes the 40 kDa subunit of cytotoxic
CC   lymphocyte maturation factor (CLMF) protein. The natural CLMF protein is
CC   a 75 kDa heterodimer, where the 2 subunits (see AAT77850 for the 35 kDa
CC   subunit) are bonded together via one or more disulphide bonds. CLMF
CC   protein is produced by a human B lyphoblastoid cell line. CLMF
CC   synergistically induces, in the presence of interleukin-2, the cytolytic
CC   activity of lymphokine activated killer cells. CLMF is also capable of
CC   stimulating T-cell growth. A novel antibody directed against an epitope
CC   of CLMF protein (see AAW24237 for epitope) is capable of neutralising
CC   and/or inhibiting CLMF bioactivity. This antibody may be used as an
CC   affinity ligand for purifying the CLMF protein. The antibody can also be
CC   used as an assay reagent for detecting the CLMF protein, and as a
CC   medicament for selectively blocking the proliferation and activation of
CC   cytotoxic T cells, e.g. in transplantation. (Updated on 25-MAR-2003 to
CC   correct PF field.) (Updated on 25-MAR-2003 to correct PR field.)

PT   New antibodies to cytotoxic lymphocyte maturation factor - useful for
PT   detecting, purifying, and/or blocking proliferation and activation of
PT   cytotoxic T cells, such as in transplantation(s).
XX
PS   Example 10; Fig 25; 71pp; English.
XX
CC   An isolated antibody has been developed which binds specifically to
CC   cytotoxic lymphocyte maturation factor (CLMF) and neutralises CLMF
CC   induced proliferation by more than 50% in a CLMF dependent T cell growth
CC   assay and/or inhibits binding of at least 60% of the factor to
CC   phytohaemagglutinin (PHA) activated peripheral blood lymphocyte (PBL)
CC   blasts as determined in a CLMF receptor binding assay. CLMF is a
CC   heterodimeric protein having a molecular weight band of 75 kD, determined
CC   by sodium dodecyl sulphate-polyacrylamide gel electrophoresis (SDS-PAGE)
CC   under non-reducing and/or reducing conditions, providing a first subunit
CC   having a molecular weight band of 40 kD and a second subunit having a
CC   molecular weight of 35 kD. The present sequence encodes the CLMF 40 kD
CC   subunit, from an example of the present invention. The antibody can be
CC   used for the purification and/or detection of CLMF. It is also used in
CC   therapeutic treatments which require selective blocking of proliferation
CC   and activation of cytotoxic T cells (CTLs) such as in transplantation

PT   Novel protein comprising cytotoxic lymphocyte maturation factor in
PT   substantially pure form or protein which exhibits cytotoxic lymphocyte
PT   maturation factor activity, useful as antitumor and immunoenhancing
PT   agent.
XX
PS   Disclosure; Fig 25; 74pp; English.
XX
CC   The invention relates to a protein which comprises a cytotoxic lymphocyte
CC   maturation factor (CLMF). The protein is useful for stimulating activated
CC   T-cells which involves treating T-cells with the protein. The method
CC   further involves treating the activated T-cells with IL2 or its
CC   biologically active fragment. The protein is useful for stimulating
CC   natural killer cells which involves treating the natural killer cells
CC   with the protein. The protein has immunoenhancing and antitumour effects
CC   when used as single therapeutic agent in vivo. The present sequence is
CC   used in the exemplification of the present invention.

PT   Pharmaceutical composition useful for activating T cell growth factors in
PT   assays comprises heterodimeric protein comprising first and second
PT   subunits and carrier.
XX
PS   Disclosure; Fig 25; 72pp; English.
XX
CC   The invention describes a pharmaceutical composition active in a T cell
CC   growth factor assay. The pharmaceutical composition comprises a
CC   heterodimeric protein having a molecular weight of 75 kDa as determined
CC   by Sodium dodecyl sulfate polyacrylamide gel electrophoresis (SDS-PAGE)
CC   under non-reducing conditions, and under reducing conditions, providing a
CC   first subunit having a molecular weight of 40 kDa as determined by (SDS-
CC   PAGE), and having a fully defined sequence of 306 amino acids as given in
CC   the specification, and second subunit having a molecular weight of 35 kDa
CC   as determined by (SDS-PAGE). Also described are: a novel cytokine protein
CC   called Cytokine lymphocyte maturation factor (CLMF) or interleukin-12 (IL
CC   -12) synthesised by mammalian cells, particularly human NC-37 B
CC   lymphoblastoid cells, and capable of stimulating T-cell growth; and
CC   monoclonal antibodies directed against (CLMF). (I) is useful as a
CC   pharmaceutical composition which is active in a T cell growth factor
CC   assay. This sequence encodes human cytotoxic lymphocyte maturation factor
CC   (CLMF) 40 kDa subunit.

XX
PT   Nucleic acid constructs encoding interleukin-12 fusion proteins useful
PT   for treating leukemia and other cancers.
XX
PS   Example; Fig 9; 73pp; English.
XX
CC   This sequence encodes the human p40 protein sequence. The invention
CC   relates to an isolated nucleic acid construct (I) comprising a region
CC   encoding an interleukin-12 (IL-12) fusion protein (comprising an IL-12
CC   p35 subunit, an IL-12 p40 subunit and a linker peptide (joining the
CC   subunits)) and a region encoding a B7 protein. (I) may be used to produce
CC   IL-12 fusion proteins according to standard recombinant DNA
CC   methodologies. The fusion proteins may be produced either in vitro in a
CC   fermentation culture or in vivo as part of a gene therapy protocol (in
CC   this case (I) is used to transform a patients cells, which then secrete
CC   the functional polypeptide to supplement the patients own production of
CC   IL-12 or to rectify mutations which lead to the expression of inactive
CC   polypeptides). The fusion proteins produced in this way may be used to
CC   treat any disease which responds to IL-12 such as tumours (both solid and
CC   dispersed of the kidney, breast, colon, ovarian and cervical tumours and
CC   melanomas) and in particular, tumours of the blood such as leukaemia.
CC   Alternatively, the polypeptides may be used as antigens in the production
CC   of antibodies to IL-12 and to assay for agonists and antagonists of its
CC   activity. The antibodies and antagonists may be used to inhibit the
CC   activity of IL-12. (I) may also be used diagnostically as a probe which
CC   hybridizes to sequences encoding IL-12 and the antibodies may be used to
CC   detect the presence of IL-12 polypeptides in samples. They may be used
CC   diagnostically to quantitate the expression of the polypeptide by
CC   patients and hence which subjects may be in need of restorative therapy.

PT   Monitoring multiple sclerosis patient taking beta-interferon or
PT   glatiramer acetate to predict treatment response by determining
PT   expression profile of inflammatory nucleic acids using RNA of patient and
PT   comparing to control.
XX
PS   Claim 1; SEQ ID NO 22; 73pp; English.
XX
CC   The present invention relates to gene expression profiling technology to
CC   quantatively measure the expression profiles of genes selected based on
CC   their role in inflammation and their susceptibility to regulation by
CC   current multiple sclerosis (MS) treatment agents by isolating RNA from
CC   peripheral blood mononuclear cells (PBMC) of patient. The invention is
CC   particularly useful for monitoring a multiple sclerosis patient taking
CC   interferon-beta (IFN-beta) or glatiramer acetate (GA) in order to predict
CC   treatment response. The present sequence is human interleukin-12 40 kDa
CC   (IL-12 p40) subunit gene. This gene is used to illustrate the evaluation
CC   of PBMC responses to in Vitro treatment with IFN-beta or GA agents by
CC   gene expression profiling technology.

PT   Treating inflammatory skin disorders or improving wound healing comprises
PT   administering to a subject an agonist or antagonist of Interleukin-23.
XX
PS   Example; SEQ ID NO 7; 52pp; English.
XX
CC   The invention relates to a novel method for treating or improving wound
CC   healing. The method comprises administering to a subject an agonist or
CC   antagonist of interleukin (IL)-23. The invention further comprises: an
CC   agonist of IL-23 derived from the binding site of an antibody that
CC   specifically binds to an IL-23 receptor; and a kit comprising the agonist
CC   and a compartment or instructions for use or disposal. The interleukin-23
CC   agents have vulnerary activity. The method is useful for treating or
CC   improving wound healing. This polynucleotide sequence represents the
CC   nucleic acid encoding a hyperkine protein used in the wound healing
CC   method of the invention.

PT   Recombinant adenovirus expressing human interleukin-12 and its
PT   preparation and use.
XX
PS   Example 3; Fig 4; 27pp; Chinese.
XX
CC   The present invention describes a recombinant adenovirus and its
CC   preparation and use, as well as medicine composite containing the
CC   recombinant adenovirus. The recombinant adenovirus is used clinically,
CC   has the advantages of low cost, easy use and high efficiency and is
CC   especially suitable for immune treatment of tumour and infectious
CC   diseases caused by bacteria, virus and parasite. The present sequence
CC   represents human interleukin 2 (IL-2) cDNA which encodes the p35 and p40
CC   proteins, which is used in an example from the present invention

TITLE Direct Submission

JOURNAL Submitted (30-MAR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site for further details.

Direct Submission
Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

Computational Analysis of Full-Length Mouse cDNAs Compared with Human Genome Sequences Mamm. Genome. 12, 673-677 (2001)
Normalization and subtraction of cap-trapper-selected cDNAs to prepare full-length cDNA libraries for rapid discovery of new genes. Genome Res. 10 (10), 1617-1630 (2000)
RIKEN integrated sequence analysis (RISA) system--384-format sequencing pipeline with 384 multicapillary sequencer. Genome Res. 10 (11), 1757-1771 (2000)
Computer-based methods for the mouse full-length cDNA encyclopedia: real-time sequence clustering for construction of a nonredundant cDNA library. Genome Res. 11 (2), 281-289 (2001)
cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by David A. Hume (Depts. of Biochemistry and Microbiology/Parasitology Institute for Molecular Bioscience University of Queensland Brisbane,Q 4072 Australia) whose assistance we gratefully acknowledge.
Please visit our web site (http://genome.gsc.riken.go.jp) for further details.

/dev_stage="Day 12 Corpus Luteum"
/clone_lib="pd12cl"
/note="Vector: T3T7PAC; Funding: A grant from the Monsanto Company to the University of Missouri. Genetic Source: Ovarian tissue (whole ovary, dissected follicles, or corpora lutea) was collected from crossbred pigs (Sus scrofa domestica), frozen in liquid nitrogen shortly after collection, and stored at -80 degrees Celsius until RNA

extraction. The tissue from several individual pigs was pooled for the purpose of RNA extraction. The specific tissues collected were fetal whole ovary; neonatal whole ovary; prepubutal whole ovary; 2, 4, 6 and 8 mm growing follicles; Day 0 follicles; Day 5 small antral follicles and corpora lutea; Day 12 corpora lutea and Day 12 follicles. More information regarding the methods can be found at:
http://genome.rnet.missouri.edu/Swine/Methods.html.
Library Construction (Standard Protocol): All procedures discussed in this section have been described in detail elsewhere (Soares et al., 1994; Bonaldo et al., 1996; Jiang et al., 2001). Total cellular RNA from each sample was isolated by using STAT-60 reagent (Tel-Test, Friendswood, TX) and the poly(A)+ RNA was obtained by two rounds of purification with the Oligotex mRNA isolation kit (Qiagen) according to the manufacturer's instructions. The libraries were constructed essentially as described by the manufacturer's instructions provided with the SuperScript Plasmid System (Invitrogen, cat. no. 18248-013). Briefly, 1mg of poly(A)+ RNA will be annealed at 37 degrees Celsius with 10mg of NotI-tag-dT18 oligonucleotide (GCTGCTCGCGGCCGC-tag-T18) and reverse transcribed at 37 degrees Celsius with SuperScript II (Invitrogen) reverse transcriptase (Jiang et al., 2001). The 'tag' represents a tissue/stage-specific ten-base sequence identifier (http://genome.uiowa.edu/pubsoft/software.html) present in the oligonucleotide used to prime first-strand synthesis. Second strand synthesis was performed with T4 DNA polymerase in the presence of DNA ligase and RNase H. After second strand synthesis, the double-stranded cDNAs was ligated to SalI adapters (Invitrogen-Life Technologies) and digested with NotI. The cDNAs will be size selected by passage through cDNA size fractionation columns (Invitrogen-Life technologies). The cDNAs derived from each developmental stage of a particular tissue were mixed on an equimolar basis and ligated directionally into the NotI and SalI sites of the pSPORT1 vector (Invitrogen). After ligation of the inserts, the plasmids will be electroporated into DH10B bacteria. Preliminary Library Characterization: Randomly chosen clones from each library were analyzed by restriction digestion to determine average insert size (96 clones) and by sequencing (~4 96-well plates) to confirm library quality [e.g. the presence of short polyA+ tails, genomic DNA contamination (must be <1%), ribosomal RNA clones (must be <1%), etc.] and to provide a sequence database representing the predominant clones in each library. The clones were sequenced at the University of Missouri-Columbia DNA Core Facility. Bioinformatics work was performed by GK Springer's bioinformatics group (WG Spollen, JE Ries, A Guillen, AA Khambati, RV Patel, CM Topinka, SB Bhuiyan) in Computer Science and Health Management and Informatics Departments at the University of Missouri-Columbia. Clone Requests: Requests for clones should be made to the Director of the University of Missouri DNA Core facility at: porcine@rnet.missouri.edu. Citations: 1. Bonaldo MF, Lennon G, Soares MB.                      /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

                     /clone="UUGC1M0232M24"
                     /sex="Male"
                     /lab_host="E. Coli strain XL10-Gold, T1-resistant, F-"
                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

/lab_host="XL1-Blue"
/clone_lib="UGA-ZmSAM-XZ2"
/note="Organ: Shoot apex; Vector: Uni-Zap XR; Site_1: EcoRI; Site_2: XhoI; This library was constructed by Xiaolan Zhang. Vegetative Shoot Apical Meristem (SAM) and leaf primordia staged P1-P4 from 14-17 day-after germination seedlings were quickly dissected into dry ice under a light microscope. Total RNA was isolated using Trizol and mRNA was purified with Dynal Oligo-DT25. ds-cDNA molecules were generated as follows. First-strand cDNA was prepared from oligo-dT selected mRNA by priming with an XhoI oligo-dT primer (5'-GAGAGAGAGAGAGAGAGAACTAGTCTCGAGTTTTTTTTTTTTTTTT). The resulting DNA:RNA hybrid was treated with RNase H and used as a template for DNA PolI-catalyzed second strand synthesis. After the addition of EcoRI adaptors, the ds-cDNAs were digested with XhoI and size-selected to be >600 bp. The resulting molecules were directionally cloned into the EcoRI and XhoI sites of the Uni-Zap XR vector. The lambda library was packaged with Gigapack III Gold packaging extract and was mass excised by XL1-Blue cells and ExAssist helper phage. Excised phagemids were titered in SOLR cells and plated onto LB-ampicillin agar plates. Base calling was conducted using Phred. Trimming was performed using Lucy with the following criteria: (-minimum 200 -error 0.01 0.01 -bracket 10 0.01). A low complexity filter was applied and additional trimming was conducted to remove E. coli, vector, and organelle contamination. After processing ~30% of the sequences contained a minimum of 10 Ts at the beginning of the sequence. For reasons that are not understood many of the clones in this library lack an XhoI site at their 3' ends."

```

bacterial alkaline phosphatase (BAP) and then decapped with tabacco acid pyrophosphatase (TAP). The decapped intact mRNA was ligated with DNA-RNA linker including EcoR I site by treatment of T4 RNA ligase and the first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. The cDNA libraries constructed by this method are full-length enriched cDNA library."

                     /clone_lib="Gm-c1075"
                     /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2:
                     XhoI; The cDNA library was constructed from mRNA isolated
                     from differentiating  somatic embryos cultered on MSM6AC.
                     The library was prepared using the  Stratagene pBluescript
                     II SK(+) library construction kit. Complementary  DNA was
                     synthesized from mRNA using a primer consisting of a
                     poly(dT)  sequence with an XhoI restriction site. EcoRI
                     adaptors were ligated to the  blunt-ended cDNA fragments
                     followed by XhoI digestion. The cDNA fragments  were
                     directionally cloned into the EcoRI-XhoI restriction site
                     of the  pBluescript vector. The ligated cDNA fragments
                     were transformed into E.coli ElectroMax DH10B host cells.
                     Tissue culture and library construction were performed by
                     Franooise Thibaud-Nissen and Anu Khana (Lila Vodkin lab,
                     University of Illinois)."

                     /clone_lib="Gm-c1079"
                     /note="Vector: pBluescript II SK+; Site_1: EcoRI; Site_2:
                     XhoI; The mRNA was isolated from roots of 8 day old
                     'Bragg' seedlings that were mock-infected 72 hours prior
                     to harvest. Dr. Gary Stacey generously  donated the
                     tissue. The roots were flash-frozen in liquid nitrogen.
                     Stratagene's cDNA Synthesis Kit (catalog number 200401)
                     was used  to synthesize the cDNA. First-strand synthesis
                     was performed with  5-methyl dCTP, hence the ligated cDNA
                     was hemimethylated. A modification  of Stratagene's
                     first-strand synthesis primer was used. An 'anchor'
                     nucleotide (V=A, C, or G) was added to the 3' end of the
                     primer [GAGAGAGAGAGAGAGAGAGAACTAGTCTCGAG(T)18V] to anchor
                     the primer at the 5' end of the poly(A) tract. After
                     second-strand synthesis, the cDNA ends were filled in with
                     cloned Pfu DNA, ligated to EcoRI adapters and subsequently
                     phosphorylated. The cDNA was then precipitated and
                     redissolved in sterile, RNase-, DNase-free water. The XhoI
                     site within the first- strand synthesis primer was then
                     restricted by digestion with XhoI from Promega (40U/ul);
                     all XhoI sites in the cDNA would be protected by their
                     hemimethylated status. The cDNA constructs were
                     size-fractionated with  a 500bp cutoff, using Sephacryl
                     S-500 High Resolution (Pharmacia Biotech) in a 2-mm
                     diameter column and a bed volume of approximately 1ml. The
                     column eluent was precipitated, redissolved, and ligated
                     into Stratagene's pBluescript II XR Predigested vector
                     (pBluescript II SK(+) vector that has been digested with
                     EcoRI and XhoI, and phosphorylated by Stratagene). This
                     library was constucted in the laboratory of Dr. Paul Keim
                     and Dr. Virginia H. Coryell at Northern Arizona
                     University."

            This sequence is from a Xenopus Gene Collection (XGC) library
            constructed by Aaron M. Zorn.
            cDNA was oligo dT primed from 5ug of poly A+ RNA from egg.
            EcoRI-NotI cut cDNA was then ligated into pCS107 with EcoRI at the
            5' end and NotI at the 3' end.
            Vector: pCS107; Site_1: EcoRI; Site_2: NotI
            Host: Escherichia coli XL1-blue.

                     /clone_lib="Mouse 10kb plasmid UUGC1M library"
                     /note="Vector: PWD42nv; Purified genomic DNA from M.
                     musculus C57BL/6J (male) was obtained  from the Jackson
                     Laboratory Mouse DNA Resource
                     (http://www.jax.org/resources/documents/dnares/). The DNA
                     was hydrodynamically sheared by repeated passage through a
                     0.005 inch orifice at constant velocity. The sheared DNA
                     was blunt end-repaired with T4 DNA polymerase and T4
                     polynucleotide kinase. Adaptor oligonucleotides were
                     ligated to the blunt ends in high  molar excess. The
                     adaptored DNA was purified and size-selected for a 9.5 to
                     10.5 kb range using preparative agarose gel
                     electrophoresis. Vector DNA was prepared from a derivative
                     of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                     inducible derivative of plasmid R1. The vector was ligated
                     with adaptors complementary to the insert adaptors and
                     purified. The sheared, adaptored mouse DNA was annealed to
                     adaptored vector DNA, and transformed into
                     chemically-competent E. coli XL10-Gold (Stratagene) cells
                     and selected for ampicillin resistance."

US-09-917-265A-29
; Sequence 29, Application US/09917265A
; Patent No. 6818444
; GENERAL INFORMATION:
;  APPLICANT: Wonderling, Ramani S.
;  APPLICANT:  Boroughs, Karen L.
;  TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES
;  TITLE OF INVENTION:  THEREOF
;  FILE REFERENCE: IM-5
;  CURRENT APPLICATION NUMBER: US/09/917,265A
;  CURRENT FILING DATE:  2001-07-27
;  PRIOR APPLICATION NUMBER: 60/223,016
;  PRIOR FILING DATE: 2000-08-04
;  NUMBER OF SEQ ID NOS: 111
;  SOFTWARE: PatentIn version 3.2
; SEQ ID NO 29
;   LENGTH: 987
;   TYPE: DNA
;   ORGANISM: Felis catus
;   FEATURE:
;   NAME/KEY: CDS
;   LOCATION: (1)..(987)
US-09-917-265A-29

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Claim 23; SEQ ID NO 29; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p40 subunit protein
CC   encoding full-length cDNA.

PT   New nucleic acid molecule comprising a sequence encoding a feline p35 or
PT   p40 subunit protein and a nucleic acid linker, useful in preparing a
PT   vaccine against infectious diseases in feline animals.
XX
PS   Example 3; SEQ ID NO 31; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline single chain IL-12p40 subunit full-length
CC   complementary DNA.

PT Vaccine for treating or preventing lentivirus infection in cats, contains
PT nucleic acid sequence encoding viral protein under control of eukaryotic
PT promoter.
XX
PS Claim 14; Page 36; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral
CC activity. The vaccine (A) and related protein-based vaccines, are
CC particularly used to treat or prevent lentivirus infections in domestic
CC cats, especially feline immune deficiency virus (FIV). Vaccination with
CC (A) allows differentiation between vaccinated and infected animals, from
CC the antibody status. The vaccines may be formulated with an adjuvant
CC (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC immune response, particularly a Th1 response

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Claim 3; Page 30; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

PT Vaccine for treating or preventing lentivirus infection in cats, contains
PT nucleic acid sequence encoding viral protein under control of eukaryotic
PT promoter.
XX
PS Disclosure; Page 29-31; 37pp; German.
XX
CC This invention describes a novel vaccine (A) for prevention or treatment
CC of lentivirus infection in felines which comprises an immunizing nucleic
CC acid sequence (I) that contains, or comprises, at least part of a gene
CC encoding a protein (II) of the virus, under control of a eukaryotic
CC promoter functional in the relevant animal. (II) is especially the
CC envelope (env) protein. The invention also describes (1) vaccine (A)
CC containing an immunizing protein, or fragment, from a lentivirus plus at
CC least one of interleukin (IL)-12 and/or -16; and (2) preparation of a
CC lentivirus protein, or fragment, especially derived from feline immune
CC deficiency virus (FIV), by expressing the corresponding nucleic acid
CC sequence in a host cell. The products of the invention have antiviral
CC activity. The vaccine (A) and related protein-based vaccines, are
CC particularly used to treat or prevent lentivirus infections in domestic
CC cats, especially feline immune deficiency virus (FIV). Vaccination with
CC (A) allows differentiation between vaccinated and infected animals, from
CC the antibody status. The vaccines may be formulated with an adjuvant
CC (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic
CC immune response, particularly a Th1 response

PT Recombinant feline interleukin-12, useful as immunostimulant and for
PT treating e.g. viral infections in cats, and related nucleic acid
PT constructs.
XX
PS Example 1c; Page 33-35; 35pp; German.
XX
CC This invention describes a novel feline interleukin-12 (fIL-12)
CC polypeptide (I) that is expressed, by recombinant gene expression in
CC eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC of subunits p35 and p40. These proteins are formed so that, in equimolar
CC concentrations and in presence of an immunizing antigen, they can be
CC administered to carnivores, particularly domestic cats. The invention
CC also describes a nucleic acid construct (II) encoding fIL-12 containing
CC sequences at least 95% identical with the p40- and p35-encoding sequences
CC (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC as immunostimulants for immunization against infectious diseases and/or
CC for treating infections or tumors in felines, especially domestic cats.
CC The products of the invention have immunostimulatory, antiviral and
CC antitumor activity. Nucleic acid constructs that encode (II) are useful
CC as adjuvants for prophylactic immunization against viral diseases and for
CC treating diseases associated with a Th1 defect. IL-12 induces synthesis
CC of interferon gamma (Th1 response). The feline interleukin-12 polypeptide
CC is useful for carnivores, and particularly domestic cats in the
CC following: (i) as immunostimulant, for preventative or therapeutic use;
CC and (ii) treating tumors and autoimmune diseases, or diseases associated
CC with a Th1 defect, especially pre-existing infections by feline immune
CC deficiency virus (FIV), feline leukemia virus and corona virus

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

PS   Claim 24; SEQ ID NO 55; 103pp; English.
XX
CC   The present invention relates to the feline interleukin (IL)-12p35 or p40
CC   subunit protein and their encoding nucleic acid molecules and a nucleic
CC   acid linker. The invention also provides the feline caspase (casp)-1,
CC   feline IL-18 single chain and canine IL-12 single chain proteins and
CC   their nucleic acid molecules. The nucleic acid molecule is useful in
CC   preparing a vaccine against infectious diseases in feline animals. The
CC   present sequence is the feline N-terminal single chain IL-12p40 protein
CC   encoding cDNA.

PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 19; Page 52-54; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine protein, FLAFp40. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

PS   Claim 6; Page 58-60; 106pp; English.
XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a feline interleukin 12 DNA sequence, as described in
CC   the invention

TITLE Direct Submission

JOURNAL Submitted (14-APR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Please visit our web site for further details.

TITLE Direct Submission

JOURNAL Submitted (30-MAR-2004) Yoshihide Hayashizaki, The Institute of Physical and Chemical Research (RIKEN), Laboratory for Genome Exploration Research Group, RIKEN Genomic Sciences Center (GSC), RIKEN Yokohama Institute; 1-7-22 Suehiro-cho, Tsurumi-ku, Yokohama, Kanagawa, 230-0045, Japan (E-mail:genome-res@gsc.riken.jp, URL:http://genome.gsc.riken.jp/, Tel:81-45-503-9222, Fax:81-45-503-9216)

COMMENT cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues.
Tissues were provided by Dr. John Todd (Dept. of Medical Genetics Wellcome Trust Centre for Molecular Mechanisms in Disease Wellcome Trust/MRC building Addenbrookes Hospital Cambridge) whose assistance we gratefully acknowledge.
Please visit our web site for further details.

                     /note="Vector: pDNR-Dual; Site_1: loxP-SalI; Site_2:
                     loxP-HindIII; Clones from this library have been
                     PCR-amplified using gene-specific primers to contain the
                     complete open reading frame (based on known gene sequences
                     available from NCBI's RefSeq). Template for PCR is cDNA
                     derived from either pooled cytoplasmic polyA RNA from 30
                     cells lines or pooled total RNA from 10 different tissues
                     (from BD Biosciences/Clontech and Washington University).
                     PCR products are directionally cloned into the loxP sites
                     of the pDNR-Dual vector. Library constructed by Dr.
                     Narayan Bhat, Earl Bere III and Hongling Liao (Gene
                     Expression Laboratory, Research Technology Program, SAIC
                     Frederick, NCI-Frederick, Frederick, MD 21702). For
                     information on which gene each clone represents, please
                     visit our anonymous ftp site at
                     ftp://image.llnl.gov/image/rearrayed_plates/IRBK.preSV.dat
                     a Note: this is a NIH_MGC Library."
